NOAAWatch website is a Web portal offering information about ongoing environmental events, and explains the role of NOAA in prediction, monitoring, and recovery from environmental hazards. It provides public access to current information on a number of environmental threats ranging from oil spills, to hurricanes and tsunamis, to space weather.

The National Hurricane Center normally issues public advisories on their website and to the media for Atlantic tropical cyclones every six hours at 4:00AM CDT, 10:00 AM CDT, 4:00 PM CDT, and 10:00 PM CDT. Intermediate public advisories may be issued every 3 hours when coastal watches or warnings are in effect, and every 2 hours when coastal watches or warnings are in effect and land-based radars have identified a reliable storm center. Additionally, special public advisories may be issued at any time due to significant changes in warnings or in the cyclone.

## REVERSE-LANING FOR HURRICANE EVACUATION

### Reverse-Laning Plan Map

### Plan for Reverse-Laning For Hurricane Evacuation

Certain strategic routes have been historically identified as hurricane evacuation routes. These hurricane routes are “signed on the ground” as such and have been presented to the public in various manners for their knowledge and use. This hurricane evacuation route network begins with state and county routes in coastal areas that then feed into US and Interstate routes. These existing hurricane evacuation routes serve as the base for the “Reverse-Laning” plan.
